HDFq1 1.2.0 Release

We are happy to announce the release of HDFq1 1.2.0! To feed community needs, a few priorities were swapped to simplify our user license and start offering support of hyperslabs. We hope this comes as exciting news!

This version includes:

- Support of (regular) hyperslab functionalities
- Support of extendible datasets
- Support for Microsoft Visual Studio 2015
- Simplified user license
- Updated reference manual
- (Please check the release notes for further details)

What's next? HDFq1 1.3.0 will be released soon - expect the following goodies:

- Support of (irregular) hyperslab functionalities
- Support of compound datatypes
- Support of enumeration datatypes
